

ETHAN PETERSON

GAME PROGRAMMER & DESIGNER

Gilbert, AZ · 602-849-1101 · epeterson3136@gmail.com · [akuro.studio](#) · [github.com/KodaNotABear](#)

Game programmer with a B.S. in Computer Science (Arizona State University, May 2026) and nine months of professional Unity experience shipping onboarding, LiveOps, and WebGL features for a live mobile racing game. Three years building embedded race telemetry for a collegiate FSAE team. Builds solo projects on the side, including a Minecraft mod in Java that recently hit beta. Seeking a junior game programmer role.

EXPERIENCE

Game Development Intern

Aug 2025 – May 2026

Pixel Pirate Studio · Off-Road Champion (mobile racing, Unity)

- Designed and implemented the new-player onboarding system, guiding players through core mechanics and progression goals in their first session
- Shipped a tournament update where players compete for virtual currency, connected to a web portal for live standings and rewards
- Ported Off-Road Champion to WebGL for browser play
- Collaborated with designers and producers in an Agile team: standups, sprint planning, code review

Data Acquisition Developer

Jun 2022 – 2025

Sun Devil Motorsports (Formula SAE), Arizona State University

- Designed and tested on-vehicle data acquisition tools across three race seasons
- Built embedded systems for live telemetry capture, including an infrared lap timing system used for on-track performance analysis

PROJECTS

Create: Cognition

Jun 2026 – Present

Create add-on for Minecraft

- Create add-on in Java (NeoForge 1.21.1): a mechanical neural-network datacenter that turns surplus rotational power into compute, trains models of mobs, and simulates their loot with zero spawned entities, a performance-friendly alternative to entity farms
- Shipped a playable beta: multiblock networks with flood-fill discovery and proportional compute allocation, sequenced-assembly recipes, an advancement tree, and full balance config

League Stats Portal

Spring 2026

Class project, Arizona State University

- C# / ASP.NET web app for League of Legends stats lookup, backed by a WCF service layer over the **Riot Games API**: Riot ID lookup, total champion mastery, and last-match stats

Black Signal

2026 – Present

Personal project

- Prototyping a solo first-person horror game in Unity (C#): on-foot exploration of a derelict space station with anomaly detection as the core loop

SKILLS

Languages: C# (Unity, ASP.NET) · C++ · Java · Python · JavaScript / React · HTML & CSS

Engines & Tools: Unity (3+ years) · Git / GitHub · Blender · FMOD · JetBrains Rider · Visual Studio

Game Development: Gameplay systems · UI implementation · Level design · WebGL builds · Onboarding / LiveOps

Engineering: Embedded systems · Data acquisition · Game servers (Docker / VPS) · Agile / Scrum

EDUCATION

B.S. Computer Science, Software Engineering Focus

May 2026

Arizona State University

- Coursework: Game Development, Computer Graphics, Algorithms, OS · Formula SAE · SoDA
